

GeneMachines Microwell Cassettes

Microwell plates in a variety of densities have greatly improved the sample handling capabilities of high-throughput genomic research labs. Unfortunately, just as tubes were juggled by technicians 10 years ago, microwell plates are being juggled now; we simply deal with a few dozen plates per day instead of a few dozen tubes. To facilitate another step forward in process simplification, Genomic Solutions is pleased to offer Microwell Cassettes to organize microwell plate transfer, storage, and presentation.

- Compatible with a wide variety of microwell plates
- Simplified tracking system
- Convenient plate handling and storage
- Seamless integration with GeneMachines Server Arm[™] and the GeneMachines HiGro[®], an incubated and shaking cassette-oriented bacterial growth chamber
