

LPmat

LP Mats are an effective method of preventing foot borne contamination from entering or leaving protected zones.

LP mats are free standing, multi-layered, floor mats. Each layer is coated with a non transferable resin, when placed at the entrance to sensitive areas they compel pedestrian traffic to step-on step-off the mat. The physical pressure of standing on the mat ensures that any loose particles on the soles of the shoes are detached and remain in the resin.

As the layer becomes saturated with dirt and soil it can be simply peeled away to reveal a new clean layer. The used layers can then be easily disposed of.

The user remains in control at all times and is not dependent on collection and removal schemes provided by external services.

TAKmats find extensive use in

- * Electronics Industry
 - * Nuclear Establishments
 - * Paint Spray Booths
 - * Optical Lens Processing
 - * Pharmaceutical
 - * Computer Data Suites
 - * Food And Drink
 - * Laboratories
 - * Ship Building
 - * Building And Construction
- And many more clean area operations

-  Layers have a high absorbency for maximum soil retention
-  Prevent the spread of contamination
-  Sustained protection
-  Multiple layers
-  Simple peel away mat design
-  30 Layers per mat
-  Freestanding
-  Available in 3 colours. (white, blue and grey)
-  No hiring or maintenance charges
-  Remove layers only when soiled
-  Only 2mm thick

| Colour | Size | Pack size | Order code |
|--------|--------------|------------|------------|
| white | 115cm x 45cm | 4 sections | D3306-4X1 |
| White | 115cm x 45cm | 8 sections | D3311-8X1 |
| Blue | 115cm x 45cm | 4 sections | D3307-4X1 |
| Grey | 115cm x 45cm | 4 sections | D3308-4X1 |
