

## Leica EG1130

### **Cold Plate**

Part No K00000022

Leica has two different stand-alone cold plates for use in clinical histopathology and biomedical research applications in its program. The EG1130 is a stand-alone cold plate with a high performance cooling system.

The Leica EG1130 is an ideal system for laboratories with need for stand-alone paraffin block cooling at various locations throughout the laboratory.

The second version Leica Microsystems can offer is the Leica EG1150C. This system has been designed as complementary product to the EG1150H paraffin dispenser. Multiple sets can easily be added to the EG1150H to increase the cooling area to meet every laboratory requirement.
