Technochair Pu is the most comprehensive range of polyurethane seating available anywhere today. The chair is arguably the most comfortable yet robust version of any polyurethane chair.

The special design of the seat and back with elliptical features enhances air flow to reduce heat build-up on the body. The texture of the chair has been selected to provide maximum grip for the operator, particularly when wearing laboratory coats or cleanroom clothing. Such features provide serious benefits for the operator without creating dust or dirt traps or slippery finishes which feature on so many other polyurethane chairs.

Where extreme hygiene is an issue in seating, Technochair lead the field in the production of stainless steel seating with both polyurethane and polycarbonate seats and backs. For food production and pharmaceutical manufacture, where hygiene is of the utmost importance, only Technochair can provide a solution.

Technochair is able to produce a wide range of bespoke stainless steel products of which these models shown are but a few examples.

The Technochair ESD polyurethane range is the most innovative of static safe seating because it is equally suitable for both traditional ESD production areas and ESD cleanrooms. It combines the benefits of static dissipative control together with a closed cell polyurethane structure which prevents any particulating. It offers a more robust solution than conventional conductive vinyl cleanroom chairs.
