

Minichiller® and Unichiller®

Unichillers with Pilot ONE

The tower models offer power with small footprints. These models are fitted with the exchangeable Pilot ONE, and are used in both research and production.

Features

- Space saving tower design: small dimensions, high powers
- Robust stainless steel construction
- Reliable continuous operation with alarm and early warning functions
- Pilot ONE with Plug & Play technology
- Splash protection of display
- Large and full colour 5,7" TFT touchscreen
- Digital level indicator
- Simple to fill and drain
- Connections for RS232, USB and Ethernet
- Strong pumps for systems with large pressure drops
- High flow rates for optimal heat transfer
- External Pt100 sensor via 4-wire Lemo connector
- 5-Point calibration
- IP-class to IEC EN 60529: 21
- Options (factory fitted)
 - Heater and adjustable over temperature protection
 - VPC (Variable Pressure Control) with steplessly variable bypass and pressure sensor
 - Winter operation for use in low temperature external environments
 - Weather protection
 - Tropical versions for environmental temperature up to +45 °C
 - Stronger pumps

Heating option

All units can be factory fitted with optional heating and independent over-temperature protection. Increasing the maximum working temperature to +100 °C and the temperature stability to ± 0,2 K. The new construction allows constant operation in ambient temperatures up to +40 °C. The water-cooled models are especially quiet and require little cooling water even at full cooling power. Despite the increasing costs of water the ROI is exceptionally short. All models with maximum pump pressure of 2,5 bar have an adjustable bypass and a pressure gauge.

Pump option

We offer alternative pumps for applications with higher pressure drops. Further information on request.

Minichillers® with OLÉ

The Minichillers with new OLÉ controller combine state of the art technology with simple operation. OLÉ models are suitable for routine tasks in research and industry and are convincing as practice oriented basic equipment.

They are equipped with USB and RS232 interfaces as standard and have a bright, large OLED display.

* With rollers (rear)

** Permissible temperature in return line +80°C

Units use natural refrigerant as standard

Option: Heating 1 kW (Minichiller 600: 2 kW) (additional cost)

The appropriate controls

An easy decision:

Pilot ONE®, KISS® and OLÉ offer a range of functionality to suit all temperature control requirements.

The three controllers mean that all applications requirements are covered. Depending on budget and application, a controller can be selected that meets the applications requirements. If only a basic functionality is required, an inexpensive model with KISS or OLÉ could be chosen. If the application

requires more extensive features, a unit that has the powerful Pilot ONE controller could be the best choice. Pilot ONE models offer the added advantage of functionality upgrades with "E-grades" where the software can be updated by entering a unit specific upgrade code.

KISS® and OLÉ Controller:

- ▶ Simple operation with four keys
- ▶ OLED display
- ▶ Basic functions

for each application

Our Plug & Play technology means that all models are equipped with easily replaceable controllers. This technology allows rapid progress in the development of operator comfort and control. Since the 1980s Huber systems have had removable controllers allowing the basic components of our products to be easily

interchanged. Thanks to backwards compatibility, it is even possible to retrofit old equipment with modern technology. The base unit and controllers are matched automatically – simply remove the old controller, fit the new one and go!

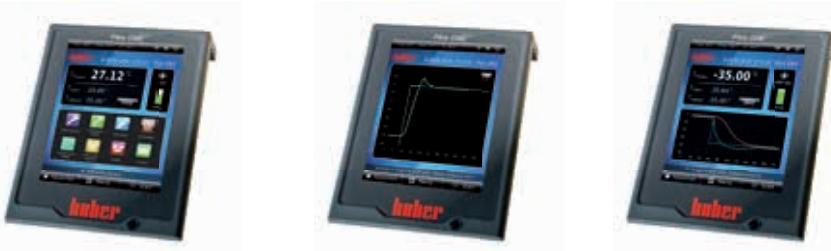

Pilot ONE® Controller:

- ▶ Comfortable touchscreen operation
- ▶ 5,7" TFT colour display
- ▶ Professional features
- ▶ USB and Ethernet
- ▶ 13 languages

User friendly, many functions and exchangeable thanks to
Plug & Play technology:
Pilot ONE

⁵ Standard on Unistats, otherwise via optional Com.G@te
or POKO/ECS Interface

⁶ Via optional Com.G@te

Process-relevant data is always in view

The Pilot ONE is plain talking, gives user confidence, is easy to operate and keeps the user continuously informed of all relevant process data

The colourful TFT display shows all Pilot ONE information in plain text. Process temperature, internal (flow or jacket) temperature, pump pressure and all safety-relevant information can be read easily and quickly.

TFT Display
Graphical Colour Display

The display can be varied as required and in addition to a concise but comprehensive list of data, the most important information (set-point, actual, and internal/process temperature and Over Temperature limit) are shown in a larger format, making the essentials easier to read from a distance. The temperature resolution can be displayed to 0.1 °C or 0.01 °C and the temperature can be viewed in Celsius or Fahrenheit format.

Depending on the configuration of the system, the pressure is variable using the "VPC" (Variable Pressure Control) feature protecting against breakage, e.g. glass reactor. The parameters of the PID control system can be manually adjusted or with intelligent "TAC" (True Adaptive Control) – the self-optimizing cascade control is fully automated, ensuring tight control and the best possible results. The "set-point limit" function, "programmable alarms" and the user-defined alarm actions add further dimensions to safe working practices. In the event of a problem, vi-

sual and audible alarms can be activated. The clock and calendar functions allow individual settings for "auto-start" in the event of power failure or a timed automatic commencement of a program.

A calibrated function facilitates both off-set and span calibrations of the internal and (optional) process sensors. Depending on the software version, a digital and/or analogue interface records data.

Plug & Play

Plug & Play technology – proven since 1982

The modular concept of the controllers facilitates easy field repairs and thanks to the clever Plug & Play technology, both Pilots are easily upgradeable using modern flash technology, as new software versions

become available. Circulators and chillers all operate with a standard user interface; an advantage for users of multiple Huber temperature control systems. The Pilot ONE controller can be mounted

remotely to control the unit via a data cable, offering unprecedeted levels of functionality and flexibility.

Plug & Play
Controller

Function Upgrade at any time

Adaptable and a good investment, thanks to the E-grade electronic upgrade function

All circulators and circulation chillers, fitted with the Pilot ONE controller, benefit from the flexibility offered by the electronic upgrade function. Even in the basic version these machines have easy to use functionality for mastering most temperature control requirements. Using E-grade, the range of functions can be expanded

E-grade®
Extended Functionality

in order to adapt to special applications. An electronic upgrade is very simple. The user only has to enter a machine specific activation code in order to activate the additional functions. The activation code can be retroactively ordered at any time, and will be sent by E-mail. As well as the standard "Basic" version there are the "Exclusive" and "Professional" to choose from. The upgrades activate additional functions such as the ramp function, programmer, TAC cascade control, adjustable user menus, calendar start, 2nd set point, graphical display and external temperature control.

The E-grade offers an easy and flexible way to adapt an existing machine to growing requirements or more complex applications.

Pilot ONE	Functionality	Cat.No.
Basic	Functions see pages 10/11	
Exclusive (additional to Basic functions)	<ul style="list-style-type: none"> + Temperature control mode (Internal / Process) + Process data logging direct to USB stick + Display resolution 0,1°C / 0,01°C + Programmer with 3 programs / 5 steps each (max. 15 steps) + Ramp function (linear) + TAC (True Adaptive Control) + Saving / loading via USB 	9495
Professional* (additional to Exclusive functions)	<ul style="list-style-type: none"> + Programmer with 10 programs / 10 steps each (max. 100 steps) + Calendar start + Ramp function (linear and non-Linear) + User menus can be customised (Administrator Level) + 2nd set point 	9496

* Installed as standard on all Unistats

The electronic upgrade allows the functionality to grow with your requirements

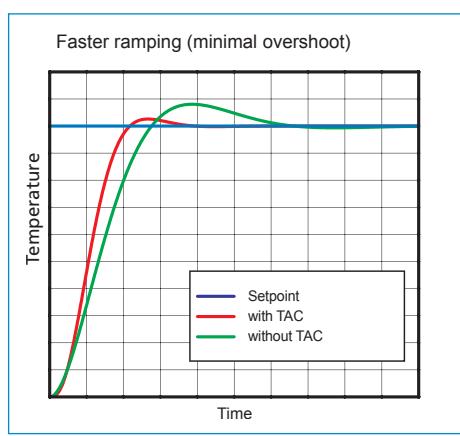

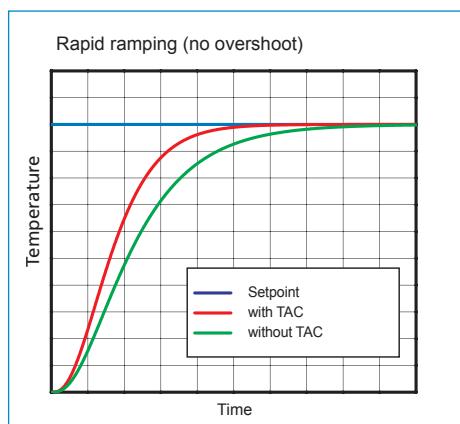

E-grade® Explore

The E-grade Explore (Cat.No. 10495) for Unistats is a development tool for chemical processes which gives access to the following values:

- Performance: Heating or cooling capacity of the system
- Temperature values: Setpoint, internal, process, return
- Temperature differences: ΔT internal-return, ΔT process-return, ΔT process-internal
- Circulation pump: Pressure / speed (depending on model)

E-grade® OPC-UA

The OPC-UA (OPC Unified Architecture) protocol (Cat.No. 10561) describes data semantically and thus allows a data exchange between automation systems without the need to program a driver for this purpose. The automation system must support OPC-UA. With the E-grade OPC-UA, Huber temperature control units with Pilot ONE can already communicate via the modern OPC-UA protocol.

True Adaptive Control

Self-optimising temperature control

Varying research criteria and process demands change the thermal load on the temperature control system.

TAC True Adaptive Control

What does not change is the requirement for good control.

The solution is "TAC" which has the capability to automatically change with those demands. By building a multi-dimensional model of the process, the TAC is able to automatically adjust its PID parameters to cope with and respond rapidly to sudden changes in the process.

Operating in both "Jacket" and "Process" control, TAC provides responsive and close control. Rapid changes with no overshoot, that is what TAC brings to the process – automatically and under all conditions. User defined ramp rates allows for faster or slower response. If TAC is not required, the user can manually adjust the PID parameters.

Variable Pressure Control (VPC)

Pressure control with controllable soft-start

VPC was developed to protect glass reactors from damage caused by high fluid pressure. VPC also compensates for changes in viscosity as heat transfer fluid is heated and cooled. Unistats for typical laboratory applications have a variable speed pump with soft-start, and using a pressure sensor can control their maximum fluid pressure. Unistats with larger capacities can control the pressure using a pressure sensor and a stepless bypass (option).

Minimal pressure and maximum flow encourages optimal heat transfer. The VPC enables the best performance to be achieved while remaining within the defined pressure limits of the application.

With kind permission of
Roche AG (CH)

Maximum HTF flow

Improved pump design together with reduced internal flow resistance gives higher HTF flows with lower HTF pressures meaning more efficient thermal transfer and faster ramping of the process for the same power.

Bench top and floor standing Unistats that use the new "M24" pump connections are supplied with "M16" adaptors to allow for convenient fitting to existing systems using "M16" fittings.

CoolNet®

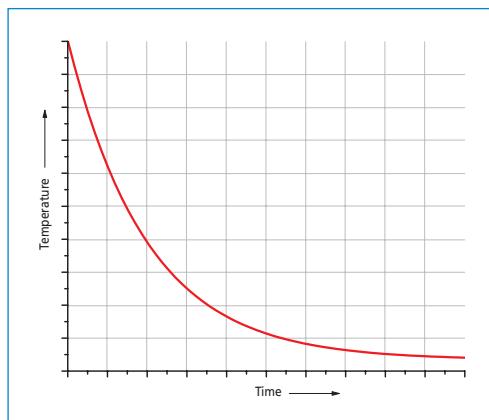

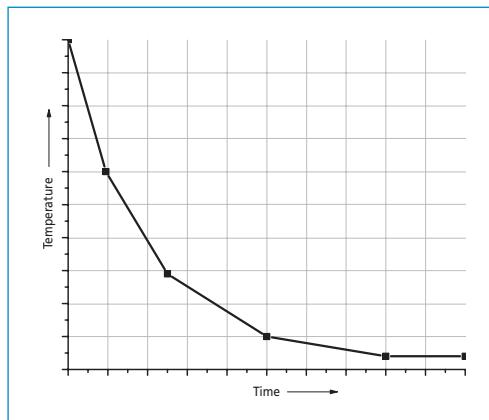

CoolNet – precise valve control

In refrigeration equipment, refrigerant is controlled by a metering valve. Unistat refrigeration works with a CoolNet stepper-motor controlled expansion valve,

that has been produced in the Tango Factory since 2002. The valve opening is precisely controlled at between 0 and 600 steps, with a resolution of 0,005 mm/step. This allows the CoolNet to achieve the optimal evaporator flow, and highest possible cooling capacity at each working temperature. Precise and reproducible control for temperatures down to -130 °C.

CoolNet®
max. Cooling Power

Programmer

Programmer with linear ramp function

Single temperature changes can be achieved using the linear ramp function. The easy to use programmer,

Programmer
with Ramp Functions

with 100 steps, is available for more complex temperature requirements. Individual steps can be pieced together to form a profile. Each step of the program can be selected to be either temperature or time stable. For each step, additional functions (potential free contact, analogue interface, temperature control mode) can be activated or deactivated.

Non-linear Ramp Function (NLR)

Designed for crystallisation processes, non-linear temperature profiles allow higher purity crystals to be produced. Instead of using the temperature programmer to piece together rectangular or linear ramps, e-functions can be used to define a continuous setpoint form. The diagrams shows the high precision of the e-function (below) in contrast to a linear ramp (above, with 6 steps).

Safety

Unistats have many features for handling temperature control applications remotely and safely during continuous operation. Over-temperature, setpoint and alarm limits can be adjusted according

Protection+
Level / Overtemperature

to the conditions of the application. The temperature and pressure sensors can be calibrated and the microprocessor controller monitors the operating status. VPC (Variable Pressure Control) monitors the maximum pressure in the fluid loop. Passive components ensure a extraordinarily high level of reliability.

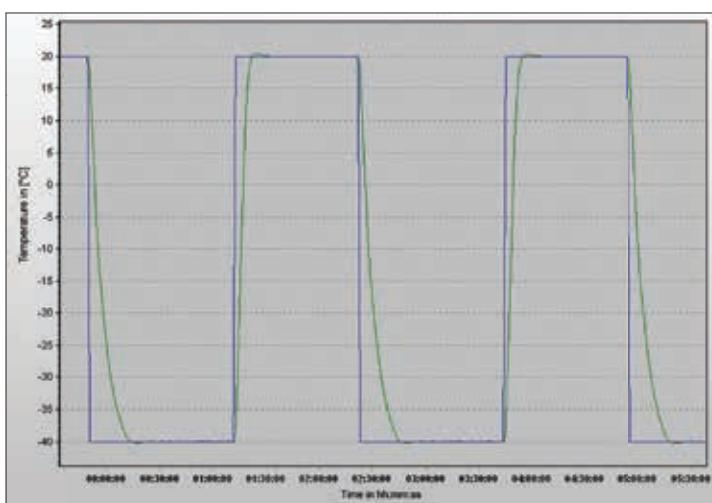

In case of emergency, Unistats can be electrically isolated. For critical processes Unistats offer emergency cooling.

"Process safety over-temperature protection":

This unique user-activated feature disables the heater while initiating 100 % cooling should an over-temperature condition be caused by a thermal runaway in the process.

Reproducibility

Unistats allow reproducible thermoregulation results with high dynamics.

Pilot ONE® Remote-Software

Pilot ONE Remote GUI is a Windows software for temperature control units using the Pilot ONE. The software enables the complete user display of the Pilot ONE to be displayed on a Windows PC, and to operate our units from the PC. The Remote GUI uses a secure authentication. It is thus certain that non authorised persons cannot remotely control the unit, nor that communication can take place with the wrong unit by mistake.

Ex-Protection

Two ATEX compliant solutions are available for ATEX areas: The Unistat can be placed in a stainless steel Ex-p pressure enclosure. Compressed air is pumped in purging the cabinet of any potentially dangerous vapours and creating a pressure slightly above atmospheric to keep potentially explosive vapours out. Alternatively an ATEX certified remote control (II 2 G EEx ib IIC T4) is located in the ATEX zone, controlling the Unistat situated in the safe zone.

Firmware-Updates

Firmware updates keep your units with Pilot ONE controller at the forefront of technology. Free updates allow you to benefit from technical advances and new functions even after the purchase. The software "Pilot ONE Flasher" is all that is required (download from www.huber-online.com). After the installation the latest firmware can be automatically downloaded from the server and transmitted to the Pilot ONE controller.

Accessories

All accessories are designed to optimise the operation of your Huber temperature control unit. The highest material quality and tested functionality guarantee reliability and the best temperature control results.

The range of accessories allow you to find all you need to operate your temperature control system. Stainless steel baths, hoses, thermal fluids, adaptors, Pt100 sensors, software, interfaces and much more.

G1 1/4 sensor for flow or return	9937	1	
Extension cable Pt100, length 3 m	6292	1	

Calibration bend

Calibration bend mounted on the machine outlet. The calibration bend has a sensor pocket for sensor which has to be calibrated by the user. The measured value appears on the display as reference for the internal flow temperature sensor.

Calibration bend	Cat.No.	G	Price
for calibration of the internal flow temp. sensor (Ø 4mm) M16x1	9914	1	
for calibration of the internal flow temp. sensor (Ø 6mm) M24x1,5	10005	1	
for calibration of the internal flow temp. sensor (Ø 6mm) M30x1,5	9779	1	
for calibration of the internal flow temp. sensor (Ø 6mm) M38x1,5	9925	1	

More dimensions and configurations on request

Thermal Fluids

Huber thermal fluids are recommended because they have excellent thermodynamic and environmental characteristics. Safe reliable operation relies on compliance with safety standards to ensure optimal results.

Safety datasheets are available at www.huber-online.com.

DW-Therm – exclusive for Unistats (closed systems)

DW-Therm is a mixture of isometric triethoxysilanes and has been developed for hydraulically systems.

- excellent stability at high temperatures
- low viscosity at low temperatures
- low volatility and pleasant odour
- easy handling (no creeping like silicone oils)
- good compatibility with silicone oils
- insoluble in water, environmentally friendly

DW-Therm HT – exclusive for Unistats (closed systems)

DW-Therm HT is a mixture of partially hydrogenated terphenyls. It is for use exclusively in high temperature Unistats.

- long lifetime at high temperatures under inert atmosphere: 3-4 years
- good thermal properties for heat transfer
- favourable heat transfer characteristics
- high thermal oxidation stability

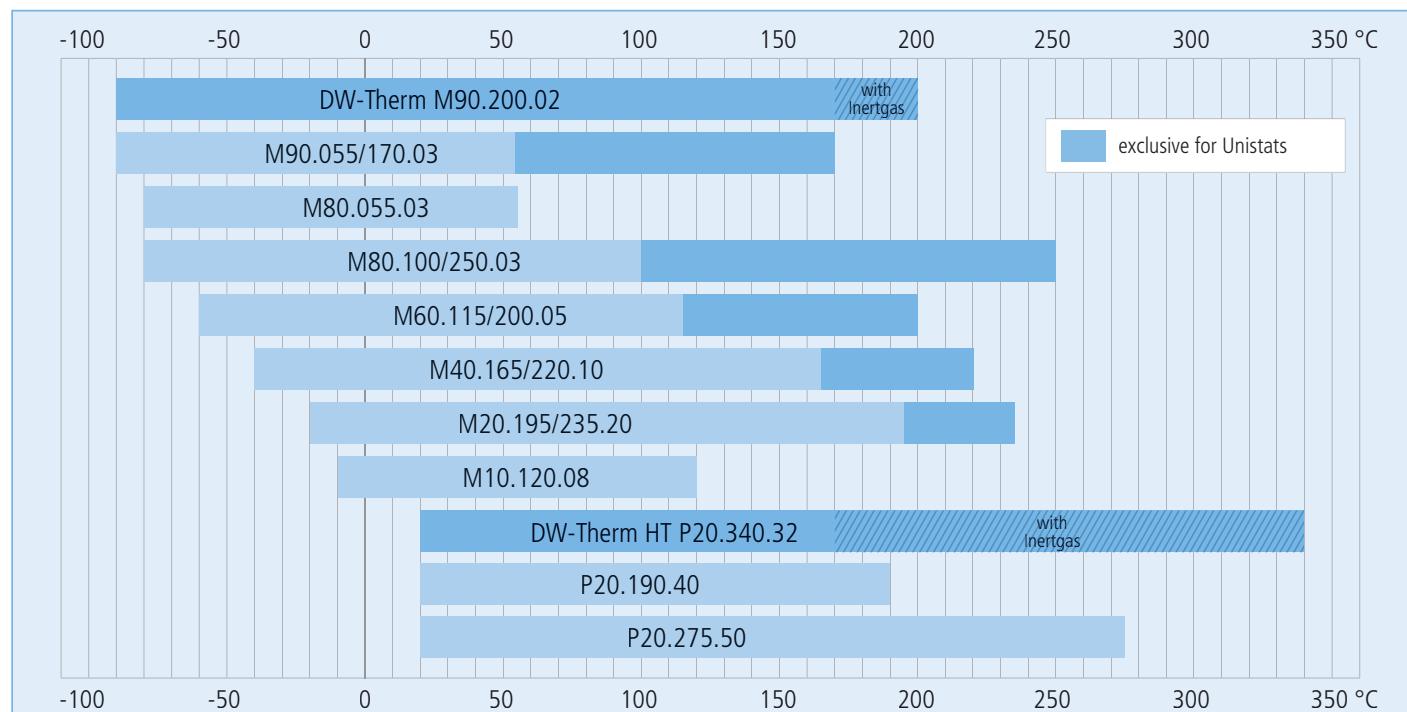

The product name gives information about the characteristics, e.g.:

Thermal Fluid	Temperature Range	Viscosity at +25°C

Unipump® Pressure Booster

Designed to compensate for pressure loss in external systems the Unipump is made of stainless steel for temperatures from -120 °C to +300 °C. The Unipump is connected in series with the pump of compatible control circulator and can be controlled via the voltfree contact of the Com.G@te.

Com.G@te® and POKO/ECS Interface

Units with the Pilot ONE controller have USB and LAN connections fitted as standard. For applications where additional connections are required, depending on the model, the following optional interface modules are available:

Com.G@te

The Com.G@te has connections complying with the NAMUR standard. The following interfaces are integrated: RS232 (bi-directional), RS485 (bi-directional), ECS external control signal, Volt free contact (programmable), AIF Analogue-Interface 0/4-20 mA or 0-10 V (bi-directional).

POKO/ECS Interface

The POKO/ECS Interface has connections complying with the NAMUR Standard and is fitted as standard on all Unistats. The following interfaces are integrated: ECS external control signal, POKO Volt free contact (programmable).

Com.G@te (NAMUR)	for	Cat.No.	G	Price
Com.G@te, intern	Petite Fleur, Grande Fleur, Unichiller with Pilot ONE, Ministats, CC-300BX to CC-906w	31217	1	
Com.G@te, external	Unistats, CC-E to CC-205B	6915	1

Profibus Gateway 3E, external (complete, in housing)	10503	3	

SpyLight®

The SpyLight software (free of charge) enables process relevant data to be visualised and documented. The communication options are RS232, RS485, USB (virtual COM-Port) or TCP/IP. SpyLight is easy to install, is economic with computer resources and child's play to use. The recorded data is displayed to a base of time; the axes are freely scalable and a zoom function helps the evaluation of individual segments.

Test with a 20 litre reactor filled with DW-Therm

Temperature with ramp function in a 20 litre reactor filled with DW-Therm

Huber Software	Cat.No.	G	Price
SpyLight (1 Channel)	6790	1	
SpyControl (10 Channel)	6792	1	

SpyControl®

SpyControl is based on the SpyLight software but offers more features. Installation and operation is identical. SpyControl can operate up to 10 channels simultaneously. Each channel is independently documented and the graphic options can be configured as required. SpyControl allows the user to issue the following instructions to the unit:

- Set point
- Change from jacket to process temperature
- Start/Stop

In addition the software offers the option of controlling one or more machines with a programmer. The user can provide temperature programs for the machines, which then automatically run. Segments of a temperature control program can be entered easily using the Temperature control-Xplorer which is a module of SpyControl. The temperature control programs produced can be modified or changed and archived. The basic course of a temperature control program can also be displayed graphically.

Trolleys

Stainless steel trolleys make the circulators mobile.

CC-308B	9355	1	
CC-315B	6126	1	

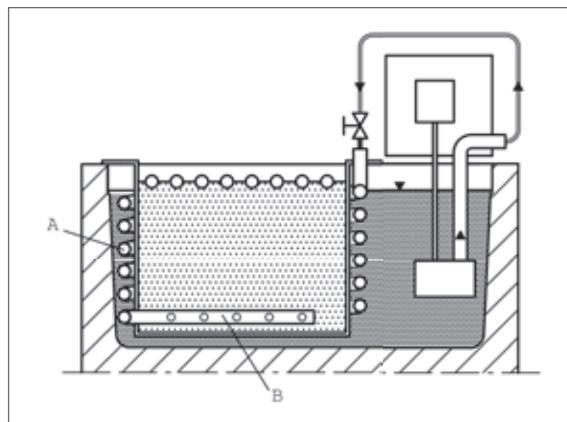

Function principle

The thermal fluid at constant temperature flows through the heat exchanger (A) and via the distributor pipe (B) down into the calibrating bath. Temperature fluctuations in the circulator are evened out in (A). The entire system acts as a calorimeter. There are virtually no gradients and no delay in the case of swift ramps. Temperature stability can be improved by a factor of 5 to 10.

The calibration baths in combination with Unistats (page 35) work in the same principle.

Displacement inserts

Simple options to boost performance

- Reducing the bath volume reduces the thermal load and leads to faster ramping times.
- Reduce the liquid's exposed surface area, which reduces moisture absorption.
- Contain the expansion volume HTF and prevent the bath from overflowing.

Polycarbonate Baths

All models are designed to operate up to a maximum temperature of +100 °C.

Model	Dimensions WxDxH (mm)	Opening WxD (mm)	Bath	Volume (ltr)	Cat.No.	G	Price

Stainless Steel Baths

Insulated stainless steel baths are available in three standard sizes. They can be customised to suit requirements at additional cost with the addition of inlet/outlet connections for either direct flow into the bath or into the jacket of the bath.

The drain is fitted as shown but can be fitted on the long side on request. The order number has the suffix -L (e.g. 6052-L).
