Purge gas generator for FT-IR

Your local **gas generation** partner

## Description

The PG14L and PG28L gas generators from Peak Scientific are suitable for laboratory detectors requiring CO<sub>2</sub> free gas such as FT-IR analysis.

Using Pressure Swing Adsorption technology to remove organic contaminants and moisture from air, these generators provide a consistent flow of air to ensure little background noise in laboratory analysis.

Requiring minimal maintenance, the PG14L and PG28L do require an external source of air to operate, Peak Scientific will be able to help with recommending a suitable air source if your laboratory does not have one.

## Applications

FT-IR microscopes

Laboratory applications requiring CO<sub>2</sub> free air

## Key Features

Purge Gas (PG) generators from Peak Scientific offer gas which is free of organic contaminants such as carbon dioxide

Ideal for commercial labs with a high throughput rate of samples

High performance filters and PSA ensure maximum reduction of moisture (< -70°C dew point).

Few moving parts means minimum maintenance requirements and 24/7 performance

Position generator where required, wall mountable for small labs

Most cost effective than any other gas supply as the FT-IR detector needs a constant flow of gas

Completely silent in operation

12 month full comprehensive on-site warranty
