Thermo Scientific Herasafe and Maxisafe 2030 Biological Safety Cabinet

Setting new standards in biological safety cabinets

B

Smarter protection that never takes a day off

Thermo Scientific[™] Herasafe[™] and Maxisafe[™] 2030i Biological Safety Cabinets leverage a legacy of global leadership in biological safety cabinet (BSC) design with breakthrough innovations to optimize contamination prevention, user convenience and information management, offering our most technologically advanced Class II cabinets available.

Equipped with "smart" self monitoring safety features, intuitive graphic touchscreen interface and built in connectivity to preserve important performance data, the Herasafe and Maxisafe 2030i BSC is designed to deliver performance with superior precision, for demanding cell culture applications and other sensitive work requiring assured safety for product, personnel and environment, especially for bio pharma and advanced research initiatives.

Thermo Scientific biological safety cabinets are designed to maximize sample protection and user safety, with an emphasis on containment, comfort and convenience, all day, every day. For more than five decades we have been a pioneer and innovator of clean air technologies. Our global vision and experience have enabled us to continually provide the best application based solutions ideally suited for your requirements and working environment, with compliance to all major worldwide safety standards.

Precise self adjusting protection

Autonomous safety features maintain proper air flow and monitor critical conditions in real time without user interaction. This supports valuable research enabling our customers to focus where needed.

Simplified operation and ergonomics

Readily understandable graphical display provides the information you need, while the electronic sash with fully hinged opening enables easy access for supplies and equipment, and simplifies easy cleaning and disinfection.

Enhanced information management

Electronically collect key operational and performance data on the secure Thermo Scientific Connect and remotely monitor from anywhere, to evaluate your processes and accelerate your discoveries.

Smart technology offers optimal containment and energy efficiency

Autonomous safety features help ensure continuous accuracy that never takes a day off – providing optimal protection from contamination by compensating to match the way you work and your lab environment.

Sash Opening 200/250mm SMARTFLOW Plus and DAVe Plus Password Protection Auto Compensating UV Efficient Design

Electronic front sash

With push button simplicity, the front window automatically positions itself at the opening mandated by regional regulation to help ensure proper working conditions. The sloped front window allows a fatigue free working position and has an aerosol-tight seal when closed.

200mm sash opening (standard)

Provides optimum balance of comfort plus efficiency.

250mm sash opening (optional)

Provides additional convenience for quick and safe movement of consumables.

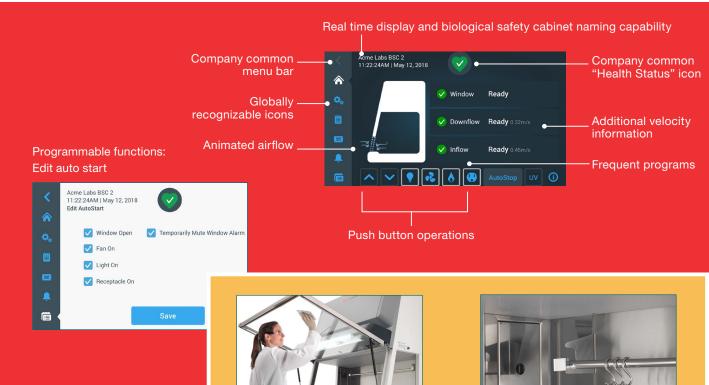

Simplified operation and ergonomics

Readily understandable graphical display provides the information you need, while the electronic sash with fully hinged opening enables easy access for supplies and equipment, and effortless cleaning and disinfection.

Helping ensure that the BSC is managing safety conditions autonomously, and is simple and intuitive to use allows our customers to fully focus on demanding applications and precision science.

Intuitive Simple Convenient

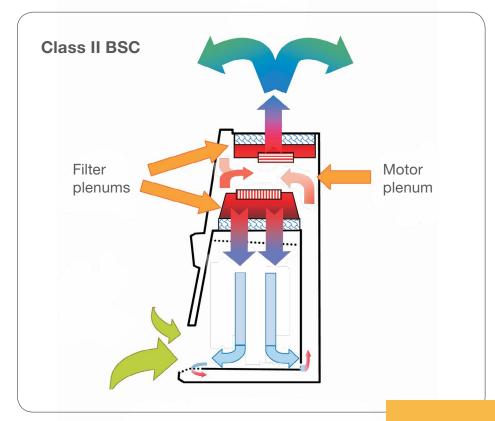

Fully opening front-hinged window design enables easy cleaning and disinfection with full access to the interior cabinet space.

Full opening also allows access to the biological safety cabinet for thorough cleaning and visible reach to all cabinet surfaces including rear wall.

316L Stainless steel interior (standard)

Most resistant to scratches and chemical attack in the user zone. All surfaces inside the Herasafe 2030i BSCare manufactured using 316L stainless steel. The finish is "brushed and sanded" which both reduces glare and offers better scratch resistance.

Proprietary design automatically compensates unique energy saving dual DC blower motors to help ensure the proper airflow rates no matter the loading condition of the protective HEPA filters. Unlike typical BSC's which rarely perform at the same levels day after day due to HEPA loading, and potential disruptions to airflow such as paper covering vent openings.

How does this work?

Independent intelligent DC motors for downflow and inflow monitor and control fan speed in real time to maintain balanced airflow during filter loading or temporary obstruction.

Exclusive to our BSCs, independent supply and exhaust blowers automatically balance both the downflow and inflow velocities to maintain both operator and sample protection.

DAVe Plus

Our unique digital airflow verification system validates protection by monitoring airflow velocities with independent pressure sensors which detect and alert to any changes across the exhaust and downflow plenums.

How does this work?

By sensing pressure in the exit of the blowers, DAVePlus monitors airflow directly for the inflow and downflow in the Herasafe 2030i BSC to help ensure both personal and sample protection.

Controlled Passcode Access

For convenience, the BSC's can be configured via the user interface to operate in "open mode" or "secure mode" depending upon working preferences and lab environment. In secure mode, a selectable passcode must be entered to enable operation of the BSC's. In this way, different units utilized by different personnel for specific applications, may be controlled by providing a unique passcode to each, or the same code to all.

Self adjusting germicidal UV light intensity

For those who routinely employ UV germicidal light to their work surface at the end of the work day, we provide a time adjustable functionality to auto shut off the light at the desired interval to preserve bulb life. Our exclusive self-adjusting exposure capability enables reproducible germicidal effectiveness with every use, by helping to ensure performance at consistent levels to protect your important work.

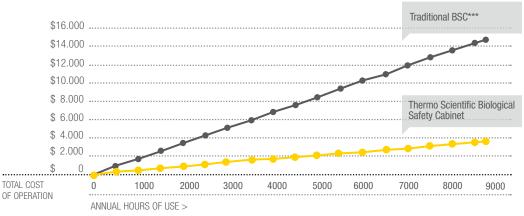

Energy efficient design

- Energy conserving dual DC motor design, generates less heat than older AC designs with double the usage lifetime and is digitally controllable for precision performance
- Stand-by mode automatically reduces blower speed to protect samples with reduced energy usage until you are ready to resume work

Optimizing total cost of operation

Thermo Scientific[™] SMARTFLOW[™] airflow compensation and balanced filters have led to safer BSCs that are easier to use and significantly less costly to operate.**

The more you use it, the more you save!

Costs, published in American Biotechnology Laboratory, September 2008.

*** Comparison based on 15 year life of 1.2 m wide biological safety cabinets and 2011 average costs of energy and cooling in the EuroZone. "Traditional BSC" estimates based on published product specifications for readily available BSCs using AC motor technology.

^{**} Compared to previous models.

7

Innovative productivity enhancements simplify use, comfort and cleaning

Full color touch screen user interface – safety you can see

Our advanced yet simple to operate, graphic user interface is customer tested to provide easy navigation and convenient illustration of airflow safety and usage data to address any lingering user concerns about the cabinet functioning properly to protect them and their valuable samples. Performance details such as user interaction logs, errors and event logs are easily identified to drive continuous process improvement and reproducibility of results.

Large interior work space/premium 316L non-corrosive stainless steel

Conveniently large interior workspace provides ample room for incorporation of instruments and process optimization devices including robotic arms. We utilize a "brushed and sanded" finish to provide maximum scratch resistance and non-reflective properties.

Padded armrests

Adjustable ergonomic armrests are provided with each unit to assure proper arm support to reduce strain during prolonged work periods while extending reach within the cabinet. Removable gel filled comfort pads are available as an option to enhance the user experience.

Interior LED lights

Visibility within the cabinet is enhanced with the use of bright, energy efficient lighting, reducing the potential for fatigue often experienced with use of standard fluorescent lighting.

Exclusive one touch start /stop function

Exclusive one touch auto start and stop function activates or deactivate all cabinet components efficiently, and is ready to use without lengthy wait times.

Smart Clean hinged front window

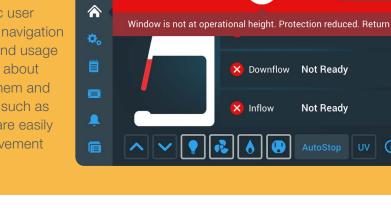

Our exclusive fully opening front hinged window design enables easy cleaning and full access to the cabinet interior work space for thorough cleaning/disinfection and incorporation of ancillary work tools and equipment as may be desired.

Standard Smartport

Provided as standard with every cabinet, Thermo Scientific[™] SmartPort[™] provides a clean and safe approach to incorporating vacuum tubing and cables through the side wall of the biological safety cabinet, for improved organization and work efficiency. The side wall plenum is under negative pressure preventing possibility of leakage in or out of the BSC during operation.

Customization

Options are available for the Herasafe and Maxisafe 2030i. We have vast experience in designing custom adaptations to our BSC's. We can design from scratch or provide frequently requested solutions.

Snooze

 (\mathbf{i})

Enhanced information management (with the convenience of connectivity

Most of the enhanced information provided by the touch screen interface can be remotely monitored and captured by web based or mobile app for subsequent analysis, minimizing the need for paper notebooks.

Standard USB data outputs

Enable export of data to external data systems if desired. A powered connection is included in the front panel to enable convenient accessory charging and accommodate future software update uploads.

Convenient event and alert messaging logs

Accessible in the user interface provide useful and important usage data and alert information for process optimization and maintenance.

Embedded connectivity

Ready for plug and play into the Thermo Scientific secure cloud system as desired. Enables simplified information sharing with colleagues and enhances productivity through performance monitoring from anywhere, anytime improving process control, reporting and asset management, with use of the exclusive free Thermo Scientific mobile app.

Future proof

The Herasafe and Maxisafe 2030i BSC has embedded capability to be connected to the Thermo Scientific Connect by wifi. When service is available, you can connect remotely via our app, to check the equipment status, and for alerts, alarms and the user log.

Triple Filter Biological Safety Cabinet

In addition to meeting the EN 12469 Standard for Class II Biological Safety Cabinets, the Maxisafe 2030i BSC with single piece worktops are independently tested and certified to DIN 12980 standard, which is "safety cabinets for handling cytotoxic substances".

This requires the highest personnel, product and environmental protection when working with CMR (carcinogenic, mutagenic or toxic to reproduction) compounds, including preparation of hazardous drugs in healthcare compounding pharmacies and facilities complying with USP <800>.

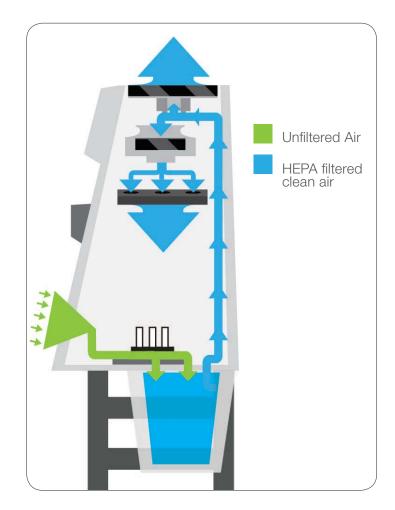

Outstanding Protection Advanced Comfort Superior Performance

Note that the default configuration for our Triple Filter BSC provides a single piece indented worktop. Segmented worktops can be selected from the options table at configuration stage (but will not conform to DIN 12980).

Triple Filter BSC's offer:

- A minimum ISO Class 5 air quality in the work area
- 100,000x better filtration efficiency than regular class II biological safety cabinets with the use of a unique triple filter design
- Safe (bag in-bag out) filter change in the cabinet work area under negative pressure
- A more ergonomic and comfortable work environment than traditional isolators
- Easy clean system ideal for cleanroom/GMP installations
- Tested and certified to both EN 12469 and DIN 12980

New bridged primary filter aperture system

Our primary filter plenum now uses a bridge system improving rigidity and security. The new H14 HEPA cartridge filters have a positive location system, and antispill design to prevent liquid damage.

Easy and safe HEPA filter changes

The positive locating H14 HEPA filters under the work surface provide easy and safe HEPA filter changes under negative pressure.

New unique sealing system simplifies installation and testing.

Stand Options

We recommend ordering a base stand to ensure a robust and stable installation of the BSC. All of our base stands have been tested with our units for stability and functionality. Choose between a fixed height, manually adjustable working height, or electrically adjustable working height. Please consider the total height of the room when choosing the right working height. Footrest and castor options are available for added convenience.

Work Surface Options

You have the option to fully customize your new BSC to accommodate any work task. The standard EN cabinet includes our stainless steel segmented worktray for easy removal, autoclaving, and cleaning under the work surface. The standard NSF cabinet includes our stainless steel single piece indented worktray. To customize your work area, order the part number to remove the standard worktray and configure the cabinet as desired. All internal surfaces and worktrays are 316 SS.

Additional Filter Options

Additional exhaust HEPA filters (AEF) can be fitted to the top of the BSC to provide 99.9999975% cumulative exhaust filtration. Please note that AEF filters are not a requirement for recirculating BSC's, even in the UK, where BS5726 has been superceded by EN12469, since 2000. Additional exhaust carbon filters can be fitted on top of the BSC, but should only be used for traces of solvents being used as an adjunct to microbiological study.

UV Options

The UV control function is designed to preserve bulb life whilst monitoring constantly. The light is programmable via the user interface. This feature measures and tracks UV bulb use ensuring that the bulbs will not require excessive replacement due to premature and unnecessary degradation. Additionally by monitoring UV bulb age, the system auto-adjusts run time to ensure consistent sterilisation.

Media Valves

Our standard BSCs feature a dual-side wall negative pressure design which allows the user to install service valves through the side access ports. We also offer factory-installed piping options on our premium units to connect utilities to the top of the BSC to conserve right to left exterior footprint.

Exhaust Duct Connection Kits			

Exhaust Duct Connection Kits

HEPA filters do a great job of trapping particles and biohazards, but they do not trap gases and toxic chemicals that may be used as an adjunct to microbiological studies. In these applications, it is important to select an exhaust duct transition to route exhaust air out of the laboratory to the external environment. We offer two different connections that can be installed in three different ways, depending upon facility requirements.

Thimble Duct Exhaust Transition (Connection diameter 200mm/8")	KTD	Acc.	50078796	50073770	50078795	50073770	50078795
Direct Duct Exhaust Transition with anti blowback valve (Connection diameter 200mm/8")	KDD	Acc.	50078791	50073771	50078790

Size/Internal width		m (ft)	0.9 (3)	1.2 (4)	1.5 (5)	1.8 (6)		
Vibration dampened surface module with granite plate (300 mm)	KAMW30	Acc.		50	073757			
Vibration dampened surface module with granite plate (600 mm)	KAMW60	Acc.	50076162					
3 liter mini-sink table top module KAMS30				50078875				
Replacement armrests KAS 30 (Set of 2 arm rests 316 SS)	KAS 30			50	073663			
Padded armrest 316 SS (Set of 2 including gel inserts)Acc.50156438								
Replacement gel pads for padded armrest (2 pcs.)		Acc.		50)156437			

UV Options

The UV control function is designed to preserve bulb life whilst monitoring constantly. The light is programmable via the user interface. This feature measures and tracks UV bulb use ensuring that the bulbs will not require excessive replacement due to premature and unnecessary degradation. Additionally by monitoring UV bulb age, the system auto-adjusts run time to ensure consistent sterilization.

Cross beam UV-C light option is side walls)includes protective cover		
Included in models: 51032715, 51032716, 51032717, 51032718 Standard		Standard (Cross Beam - in Side Walls)
Available for models: 51032711, 51032712, 51032713, 51032714	Option	51900642 (Cross Beam - in Side Walls)

Media Valves

Our standard BSCs feature a dual-side wall negative pressure design which allows the user to install service valves through the side access ports. We also offer factory-installed piping options on our premium units to connect utilities to the top of the BSC to conserve right to left exterior footprint.

Rear Wall Media Connections

3 Utility Connectors prep (rear wall)-Select rear wall service taps additionally	Option			
Available for models: 51032711, 51032712, 51032713, 51032714	Option	51901251 (G3/8")		
Included in models: 51032716, 51032717, 51032718, 51032719	Standard			
Available for USA country versions	Option	51901252 (NPT3/8)		
Rear Wall Service Taps/Media Valves (supplies are connected above BSC)			
Combustible Gas Tap for rear wall	Acc.	50068235		
Non-combustible Gas Tap for rear wall	Acc.	50068234		
Water Tap for rear wall	Acc.	50068233		
Vacuum Tap for rear wall	Acc.	50068232		
Side Wall Service Taps/Media Valves/Lead Throughs				
Combustible Gas Tap for side wall	Acc.	50046015		
Non-combustible Gas Tap for side wall	Acc.	50045959		
Water Tap for side wall	Acc.	50044679		
Vacuum Tap for side wall	Acc.	50044678		
Hose connection for side wall, hose dia 10-13 mm	Acc.	50059017		
Hose connection for side wall, hose dia 3 mm	Acc.	50076408		
Hose connection for side wall, hose dia 6/3 mm	Acc.	50066668		
Solenoid Valve (Should be quoted with combustiblegas G3/8 connection				
Solenoid Valve for Combustible Gas Tap	Acc.	50074905		

Not all BSCs are manufactured to the same safety standards. Our design philosophy is grounded in compliance with the recognized worldwide safety standards, because your work cannot compromise on safety. Our biological safety cabinets are subjected to all the following certifications:

LNE

EN 12469

Our Class II biological safety cabinets are independently tested and certified to EN 12469 standard for Class II biological safety cabinets by TÜV Nord, the leading testing agency in Europe.

Our Class II biological safety cabinets are independently tested and certified to EN 12469 by LNE, the leading testing agency in France. Available end of 2018.

NSF

Our Class II biological safety cabinets are independently tested and certified to NSF/ANSI 49, by NSF International, a leading testing agency in North America and recognized globally. Available end of 2018.
