

Self Regulating Vacuum Distillation System

Hold Back Pumps create a fully-automatic distillation process without attention to fraction quantities, manual adjustment, or continuous regulation. The resultant distillation is considerably better and more economically sound than using a diaphragm pump system with a solenoid valve.

The outstanding design of the Hold Back Pump utilizes solvent flow to automatically regulate the diaphragm pump vacuum level.

Features

- 100% automatic distillation
- Collection flask at atmosphere pressure
- Easy connection to all common rotary evaporators.

Applications

- Distillation of large volume of solvents
- Crystallization or re-crystallization
- Recycling Solvent
- Powder and granule drying
