

Operating Instructions

Varioshake Shaking Apparatus
VS 8 O, VS 8 B, VS 8 OE, VS 8 BE
VS 15 O, VS 15 B, VS 15 T, VS 15 R
VS 30 O

VS 8 OE, VS 8 BE

An electronically geared AC motor as well as a stable and durable shaking mechanism create two different Shaker types for orbital and reciprocating motions. The units are designed for use in incubation rooms. For permissible environmental conditions, please refer to the technical data of these instructions.

VS 8 O, VS 8 B, VS 15 T, VS 15 R, VS 15 O, VS 15 B, VS 30 O

Electronically geared AC motors as well as stable and durable shaking mechanisms create seven different Shaking Apparatus models (three load classes) for four different motions: orbital, reciprocating, orbital rocking and rocking. Shaking frequency and remaining running time are LC displayed during operation. It is possible to run the units with Digital Control Unit via PC (RS 232 – interface optional available).

LAUDA Varioshake Shaking Apparatus are extremely silent and universally applicable, suitable for both, gentle moving of liquids and vigorous mixing.

Before installation, please check whether contents of package are in good order and complete. Should you note any damages or have any reasons for complaint, please contact your supplier or directly us.

1 Use of the Distillation Apparatus

1.1 Intended Use

The information in these operating instructions must by all means be carefully read and observed. Only then a perfect functioning of the Shaking Apparatus can be guaranteed. The units may only be installed and operated by persons who have made themselves familiar with these operating instructions. The frequency of the shaking motion can be set and is electronically regulated. Laboratory vessels that are to be used on the Shaking Apparatus must be fixed safe-to-operate. The maximum usable shaking frequency is also determined by the kind and weight of the load. Provide sufficient working space in the vicinity of the unit to put down accessories in use safely.

Caution:

due to increased risk of injury never reach into the unit as long as it is still in motion.

1.2 Improper Use

LAUDA Varioshake Shaking Apparatus, operated in a laboratory, are no Medical Devices. They fall neither under national nor international Medical Device Directives and have to be used and applied accordingly. The Shaking Apparatus may not be used in potentially explosive surroundings and may neither be set up nor operated in laboratory areas with aggressive or corrosive ambient.

By all means make sure to prevent the shaking procedure creating an explosive atmosphere during operation of the Shaking Apparatus.

2 Warranty conditions

LAUDA offers a standard 12 month manufacturer's warranty from the date of purchase.

3 Before Initiation

The information in these operating instructions must by all means be carefully read and observed. Only then a perfect functioning of the Shaking Apparatus can be guaranteed. A free of charge guarantee repair cannot be granted for defects due to improper installation or handling.

Safety precautions are marked with the following symbols

Read and observe the operating instructions

Warning of hand injuries

Warning of dangerous electrical voltage

General warning

Before maintenance and repair disconnect the unit all-pole from the electrical mains (pull the plug from the socket).

4 Transport, Set-up and Location of the Shaking Apparatus

Protect yourself and the unit during transport and setup by working carefully and avoid danger of e. g. shifting or tilting the unit. Place on solid, even and level surfaces inside buildings only. The location must provide sufficient space as well as the necessary carrying capacity for the unit (unit weight as per Technical Data, of this Operating Instructions, plus weight of the accessories and load). The unit is suitable for bench mounting indoors and for use in incubation and tempering rooms. For use in incubation and tempering rooms please observe the environmental conditions stated in the Technical Data. The Shaking Apparatus is not suitable for use in explosion endangered surroundings, e. g. during anaesthesia with inflammable gas or steam types. In some Shaking Apparatus models, a paperboard strip has been inserted as a transport protection between shaking table and housing. The paperboard strip must be removed before installation.

5 Operating Voltage

The Shaking Apparatus must be connected to the mains through a correctly installed shock-proof socket or through an on-site main switch. The Shaking Apparatus is a protection class I electrical appliance, a connection to the earth conductor (PE) must be ensured. For information on the required mains fuse please view Technical Data of this manual. The electrical connection must ensure an all-pole separation of the Shaking Apparatus from the mains at any time.

The left knob of the unit (only models VS 8 OE and VS 8 BE) must be off (position O). The voltage on the nameplate (at the back of the unit) must be identical to the mains voltage. If they are identical, connect the unit to the mains. For further information, please also refer to chapter 13 of these operating instructions "Connection to the Mains Supply".

6 Initiation – analog control VS 8 OE, VS 8 BE

Caution:

due to increased risk of injury never reach into the unit as long as it is still in motion.

Caution:

by all means make sure to prevent the shaking procedure creating an explosive atmosphere during operation of the Shaking Apparatus.

Before initiation turn the left-hand control knob anti-clockwise to limit stop (minimum shaking frequency). Then turn right-hand control knob clockwise until the green pilot lamp glows.

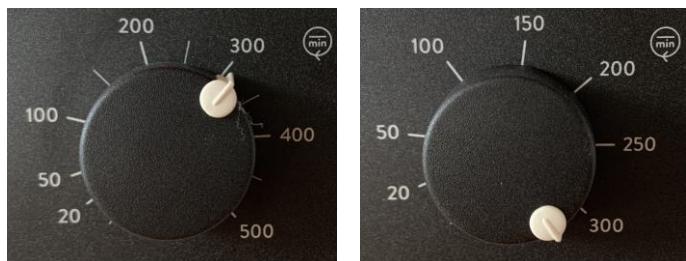

6.1 Choosing the operation mode

For continuous operation turn the knob to the first scale line; the knob will catch there. To switch off, turn the knob anti-clockwise to position 0. For timed runs turn the control knob past the scale line for continuous run to the scale graduation marks for timed runs, showing time limits in minutes. The maximum timed period is 60 minutes. After expiry of the timed run, the Shaking Apparatus will be switched off automatically. Timed runs chosen by mistake can be reversed by turning the control knob anti-clockwise.

To switch off the Shaking Apparatus, turn the control anti-clockwise to position 0.

6.2 Choosing the shaking frequency

Turn the left-hand control knob clockwise to increase the shaking frequency and anti-clockwise to decrease the shaking frequency.

The shaking frequency ranges of Shaking Apparatus are stated in the Technical Data of these operating instructions.

7 Initiation – digital control VS 8 O, VS 8 B, T, R, O, VS 30 O

Caution:

due to increased risk of injury never reach into the unit as long as it is still in motion.

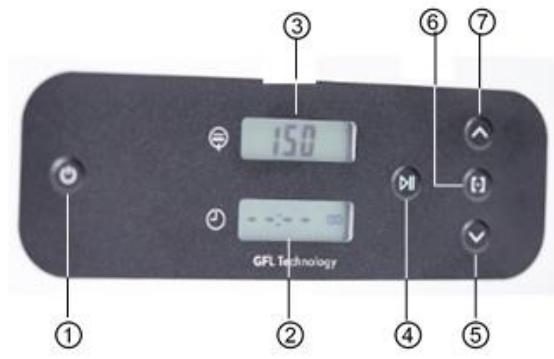

Caution:

by all means make sure to prevent the shaking procedure creating an explosive atmosphere during operation of the Shaking Apparatus.

To initiate, press switch 1. Displays 2 and 3 show the memorized set points for running time and shaking frequency

7.1 Operation and display elements on the control panel

- ① To switch the Shaking Apparatus on and off
- ② Display shows the preset running time and the remaining running time during operation of the Shaking Apparatus
- ③ Display shows the preset or actual shaking frequency
- ④ Switch: to start or to terminate the shaking motion, and to confirm altered set points of shaking frequency and running time
- ⑤ Switch: to set lower shaking frequency and running time points
- ⑥ Change-over key: switches to setting shaking frequency and running time points.
- ⑦ Switch: to set higher shaking frequency and running time points.

7.2 Setting shaking frequency and running time

After pressing switch 1 to switch on the Shaking Apparatus, displays 2 and 3 show the last set and memorized set points of running time and shaking frequency. By pressing switch 6 the setting mode of the unit alternates between setting modes of shaking frequency and running time. Displays 2 and 3 show the respective set point, put in flashing brackets. The respective set point can now be increased using switch 7 or decreased using switch 5.

Altered set points are confirmed using switch 4. The Shaking Apparatus starts operation. The set points are memorized after switching off the shaking motion with switch 4 and switching off the unit with switch 1

The running time of the Shaking Apparatus can be preset either between 1 minute and 99:59 hours for timed runs or for continuous operation. Continuous operation can be set with switch 5 in the operation mode and is displayed by the symbol - - : - -. The settable shaking frequency range of the various models can be taken from Technical Data of these operating instructions. Mistakenly preset set points can be altered during operation with switch 6 and switches 5 and 7, and switch 4, as described above. Set points that are altered during operation will not be memorized when the Shaking Apparatus is switched off with switch 1.

If the Shaking Apparatus is not used for a longer period, it should be separated from the mains.

7.3 Remote control via PC (optional RS 232 - interface)

Caution:

Before initiation, please check the Shaking Apparatus assembly to make sure that any hazard is excluded. The Shaking Apparatus must be operated within field of vision.

If the Shaking Apparatus is in remote control mode, take special caution in the operation area of the Shaking Apparatus.

The remote control programme may start the Shaking Apparatus at any time.

An interface module with connection at the back of the Shaking Apparatus generates the transmission format RS 232.

The interface allows reading out current actual and set values. In order to set values, the unit has to be switched to remote control mode via a PC signal. Function of switches 4 – 7 is then blocked. A PC symbol flashes in display 3.

The connection cable between interface and PC must not be longer than 3 metres. After switching on the remote control mode, the regulator is inactive, the shaking motion is switched off, and the set value is 0.

If the transmitted set value is within the permissible range, the Shaking Apparatus will start shaking at the chosen frequency. The shaking motion is cut off by setting the value to 0. If the Shaking Apparatus is to be operated manually again, the remote control mode has to be switched off via a PC signal. The PC symbol in the display disappears.

For operation of the RS 232 interface, an interface protocol is available on request. Please advise model and serial numbers of the Shaking Apparatus.

8 Functional description

Analog control:

Über ein mechanisches Uhrenlaufwerk wird der Schüttelapparat in der Betriebsart Dauer- oder zeitbegrenzter Betrieb eingeschaltet.

Digital control:

A microprocessor controller regulates the shaking frequency of the Shaking Apparatus in continuous or timed operation. The Shaker can be operated manually via the control panel as well as in remote control mode via PC.

All models are equipped with ac motors, protected against overload. The electronic frequency control ensures a gentle start-up, irrespective of load.

A stable and durable mechanical construction serves to impart the torque of the motor with the specific shaking motion to the shaking platform.

The four plastic pins on the shaking platform serve to fix the accessories (chapter 14).

9 Servicing, maintenance and clearing possible defects

Please make sure that no fluids come into contact with cable connections or the electrical parts of the inside unit!

Before cleaning and/or opening the unit (only by an electrician!) always pull the plug from the mains socket.

9.1 Exchanging the fuses

The two fuses of the Shaking Apparatus are situated in a drawer at the back of the unit. In order to check or to exchange these fuses, press the fixing clips on both sides of the drawer and pull.

The fuses may only be exchanged against fuses of the same type. Information on the type of fuse can be found on the rating plate next to the appliance plug.

9.2 Breakdown in case of overload and mains failure

Overheating of the Shaking Apparatus due to overload will cause the unit to be switched off. Caution, the unit will restart automatically after cooling down. After a mains failure, the Shaking Apparatus with digital control will not restart automatically, but has to be restarted as described in chapter 7.2.

If the Shaking Apparatus fails due to any kind of breakdown, the unit must by all means be separated from the mains before it is touched.

LAUDA Shaking Apparatus are produced with first class materials and are made to withstand even rough service conditions. Nevertheless, the units should only be subjected to rough conditions within sensible limits. The off-white powder-coated surfaces of the housing and the shaking platform may be cleaned with mild detergents, if necessary.

Please do not hesitate to contact your local dealer or us for technical support. In case of complaints please contact your local dealer or us.

9.3 Technical support

You can call our customer service at any time for technical support relating to LAUDA Varioshake Shaking Apparatus appliances.

Phone : +49 (0) 9343 / 503-350

Fax : +49 (0)9343 503-283

Email : service@lauda.de

Maintenance, repairs and modifications must be carried out by a qualified electrician (section 2 (3) DGUV Regulation 3) according to the General Rules of Technology (section 2 (2) DGUV Regulation 3). Only original spare parts may be used. Request that the person performing the work provides written confirmation of the type and scope of the work carried out (company, date, signature).

10 Disposal of Old Units

LAUDA will take responsibility, within the scope of the legal directives, for an environmentally sound handling and disposal of all used LAUDA units as of the production year 1995 that are returned to us free of charge and will have it materially recycled. Before the unit is returned, a legally binding declaration must be provided from the sender confirming that the unit is free from harmful and/or hazardous contaminations as well as from hazardous substances caused by the previous use of the unit.

LAUDA laboratory apparatus are exclusively designed for industrial use and may not be disposed of through public waste disposal authorities.

EAR Registration Number WEEE-ID.NO.DE 67770231

14 Accessories

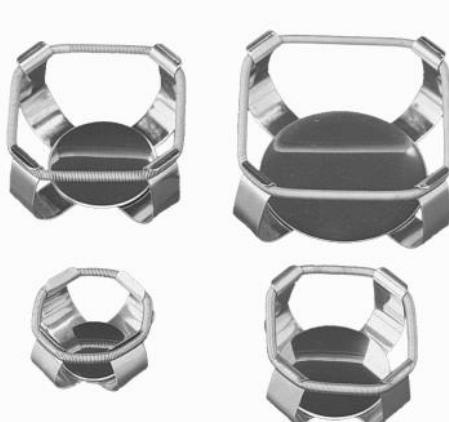

Shaking Tray with holes to fix clamps for Erlenmeyer flasks and separating funnels, and to fix test tube rack A000059

Part-No. A000044 made of stainless steel for models VS 8

Part-No. A000045 made of stainless steel for models VS 15

Part-No. A000047 made of anodized aluminium for model VS 30 O

Clamps for Erlenmeyer flasks, made of stainless steel. Supplied complete with fixing material to be screwed onto shaking tray A000023.

* = maximum quantity of clamps per tray.

Part-No. A000025 for	25 ml Erlenmeyer flasks
Part-No. A000026 for	50 ml Erlenmeyer flasks
Part-No. A000027 for	100 ml Erlenmeyer flasks
Part-No. A000028 for	200 ml Erlenmeyer flasks
Part-No. A000029 for	250-300 ml Erlenmeyer flasks
Part-No. A000030 for	500 ml Erlenmeyer flasks
Part-No. A000031 for	1000 ml Erlenmeyer flasks
Part-No. A000053 for	2000 ml Erlenmeyer flasks

Clamps for separating funnels, made of stainless steel. Supplied complete with fixing material, to be screwed onto a shaking tray.

Part-No. A000054 for	50ml separating funnels
Part-No. A000055 for	100ml separating funnels
Part-No. A000056 for	250ml separating funnels
Part-No. A000057 for	250ml separating funnels (conical form)
Part-No. A000058 for	500ml separating funnels

Non-slip Rubber Mat for slow moving e. g. of culture media in petri dishes.

Part-No. A000042 for VS 8

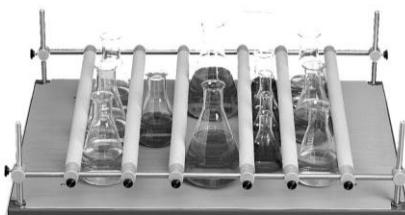

Part-No. A000043 for VS 15

Universal mount for safe fixing of various shaking objects between rubber-coated bars.

Part-No. A000048 with 4 rubber-coated bars for VS 8

Part-No. A000049 with 6 rubber-coated bars for VS 15

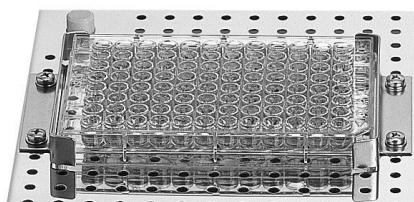

Part-No. A000050 with 6 rubber-coated bars for VS 30

Adhesive mat, black. Strong adhesive special mat for easy attachment of different vessels onto the shaking platform or tray. Max. shaking speed: up to 250 min^{-1} (depending on shape and weight of the vessel as well as on the shaking amplitude). Dimensions: 200 x 200 mm, the mat can be cut or trimmed with scissors.

Temperature: 15 bis 50 °C

Part-No. A000041

Holder for fixing test plates on shaking trays
one set, including screwing material

Part-No. A000061

Test Tube Rack, seat for test tubes can be tilted by 90 ° for easy loading, with springs for firm hold and silent shaking of the tubes. Supplied complete with fixing material to be screwed onto a shaking tray.

Part-No. A000059 for 24 tubes 75-160 mm length / Ø 12-17 mm

17 Product Returns and Clearance Declaration

Product Returns and Clearance Declaration

Product Returns

Would you like to return a LAUDA product you have purchased to LAUDA? For the return of goods, e.g. for repair or due to a complaint, you will need the approval of LAUDA in the form of a *Return Material Authorization (RMA) or processing number*. You can obtain the RMA number from our customer service department at +49 (0) 9343 503 350 or by email service@lauda.de.

Return address

LAUDA DR. R. WOBSER GMBH & CO. KG

Laudaplatz 1

97922 Lauda-Königshofen

Deutschland/Germany

Clearly label your shipment with the RMA number. Please also enclose this fully completed declaration.
